HO VAN DANH

Backend Developer (.NET / ASP.NET Core)

Phone: 0978737826 | Email: hovandannh@gmail.com | Address: Ward 6, Go Vap District, Ho Chi Minh City

Core: .NET Backend APIs | **Domains: ERP, HR, Project Management, WebGIS** | **Strength: Kafka, SignalR, PostgreSQL**

PROFESSIONAL SUMMARY

Junior Back-end Developer specializing in C#, ASP.NET Core, and enterprise ERP systems, with hands-on experience building practical business modules for construction project management, HR administration, document/file workflows, disbursement planning, contract tracking, reporting, and WebGIS file management. Strong foundation in RESTful API design, Entity Framework Core, PostgreSQL/SQL Server, Redis, Kafka, SignalR, and Clean Architecture. Comfortable turning complex customer workflows into maintainable APIs, asynchronous processing, real-time collaboration features, and management-ready statistics.

TECHNICAL SKILLS

Languages: C#, JavaScript, HTML, CSS, Dart

Backend: ASP.NET Core Web API, ASP.NET MVC, RESTful API design, middleware, dependency injection, model validation, async/await, background/event-based workflows

Data & ORM: Entity Framework Core, LINQ, query optimization basics, SQL Server stored procedures, PostgreSQL, Apache AGE graph queries, Redis caching fundamentals

Architecture: Clean Architecture, SOLID principles, repository/service patterns, DTO mapping, clean code, modular API design

Messaging & Real-time: Apache Kafka fundamentals for asynchronous communication, SignalR for real-time notifications and discussions

Cloud & Tools: Docker basics, Git/GitHub, Postman, Firebase, Flutter basics

SELECTED BACKEND MODULES

- Construction project management: project profile, disbursement, capital planning, project-topic filtering, progress reporting, and operational issue tracking.
- Document and file workflows: official documents, project records, file/folder management, contract documents, bidding packages, and guarantee contracts.
- Workload and contract output: contract-based work volume, cumulative progress, task reports, discussion threads, and management statistics.
- HR administration: departments, employees, user roles, permissions, and organizational access control.
- Event-driven and real-time features: Kafka-based asynchronous service communication and SignalR notifications/discussions for collaboration updates.
- WebGIS file management: hierarchical file APIs using PostgreSQL and Apache AGE for complex tree-structure queries.

WORK EXPERIENCE

DP UNITY — Fresher / Junior .NET Developer | Ho Chi Minh City
06/2025 - Present

Enterprise ERP - Construction Project Management & HR Modules *(10/2025 - Present)*

- Participated in building a construction project management module covering project information, project status, operational issues, work reports, and customer-requested project filtering by specialized topics.

- Developed backend APIs for disbursement tracking, capital plan statistics, capital usage monitoring, and management reports for construction projects.
- Built document and project-record workflows including official documents, hồ sơ, file/folder management, bidding packages, contracts, and guarantee contracts.
- Implemented features for contract-based work volume and cumulative progress tracking, helping teams follow sản lượng công việc and project execution against contracts.
- Supported collaboration features such as project discussions, task/report updates, and real-time communication flows for internal users.
- Contributed to HR management features including departments, employees, users, roles, permissions, and organization-based access control.
- Implemented Kafka for asynchronous event-driven communication between services and integrated SignalR for real-time notifications and discussion updates.
- Applied Clean Architecture, dependency injection, asynchronous programming, and EF Core patterns to keep the ERP modules maintainable and easier to extend.

Tech stack: ASP.NET Core, Entity Framework Core, PostgreSQL, Redis, Apache Kafka, SignalR, Docker, Amazon S3, RESTful APIs, Clean Architecture

WebGIS Solution - Hierarchical File Management *(06/2025 - 09/2025)*

- Developed backend APIs for a hierarchical file management system in a WebGIS solution.
- Leveraged PostgreSQL and Apache AGE to handle complex tree-structure and parent-child relationship queries.
- Used Redis and EF Core in the API layer to support faster data access and maintainable data operations.

Tech stack: ASP.NET Core, Entity Framework Core, PostgreSQL, Apache AGE, Redis, RESTful APIs

VM STYLE — Backend Developer Intern | Ho Chi Minh City
04/2024 - 08/2024

Internal Enterprise Resource Planning (ERP) System

- Collaborated with the backend team to develop and maintain core modules of the internal ERP system using C# and ASP.NET Core.
- Designed and optimized SQL Server stored procedures for complex inventory and sales reporting logic.
- Built and integrated RESTful APIs to connect the web dashboard with backend data workflows.
- Refactored legacy code to improve maintainability and readability following Clean Code standards.
- Strengthened OOP, asynchronous programming, and SOLID principles through real production-style backend tasks.

Tech stack: ASP.NET MVC, ASP.NET Core Web API, Entity Framework Core, MS SQL Server

EDUCATION

Cao Thang Technical College — Associate Degree in Information Technology
2021 - 2024
